DETAILED ACTION

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

Applicant's amendments to the claims filed March 10th, 2009 has been fully considered. In light of Applicant's amendment and remarks, claims 1, 3, 5-8, and 10-13 are allowed and renumbered to claims 1-10.

In light of Applicant's show of unexpected results and Applicant's amendment which now recites a specific genus of antibacterial agents combined with prednisolone, the 103 (a) rejection over Farnsworth et al. (Canadian J. of Comp. Med., July 1975, (39): 340-348) in view of Lohuis et al. (J. Dairy Sci., 1989 (72): 75-98) is hereby withdrawn.

The following is an examiner's statement of reasons for allowance: Claims 1, 3, 5-8, and 10-13 are drawn to a pharmaceutical composition for intramammary administration to a non-human mammal, said pharmaceutical composition providing increased anti-inflammatory efficacy in the non-human mammal while not increasing immunosuppressive side effects in the non-human mammal to which it has been administered, wherein the pharmaceutical composition comprises: a cephalosporin, prednisolone, and a pharmaceutically acceptable carrier; wherein the pharmaceutical composition comprises 20-40 mg of prednisolone per unit dose; and further wherein the increased anti-inflammatory efficacy while not increasing immunosuppressive side

effects may be determined by displaying a similar leukocyte count upon administration to the non-human mammal when administered intramammarily, as compared to the non-human mammal to whom the pharmaceutical composition has not been thus administered. There is no prior art disclosing applicant's composition, particularly with a cephalosporin and prednisolone in an amount of 20-40 mg as disclosed in claim 1. The closest art is Farnsworth et al. (Canadian J. of Comp. Med., July 1975, (39): 340-348) in view of Lohuis et al. (J. Dairy Sci., 1989 (72): 75-98). Farnsworth et al. teach a composition comprising an antibiotic (i.e. antibacterial agent) and steroid treatment in cows. In particular, Farnsworth et al. teach the use of sterile water (i.e. carrier) as the diluent for 250 mg dihydrostreptomycin (i.e. antibacterial agent) and 10 mg of prednisolone injected into the teat cistern (i.e. mammary glands) of cows. Farnsworth et al. do not specifically teach a composition comprising a cephalosporin and 20-40 mg of prednisolone per unit dose as recited in claim 1. Lohuis et al., on the other hand, teach the effects of 40 mg of prednisolone on local and systemic in *E. coli*-induced mastitis in lactating cows. In particular, Lohuis et al. teach that *E. coli* injection produced inflammation in the infused quarters. Lohuis et al. further teach that corticosteroid treatments including those with 40 mg prednisolone led to diminished local signs of inflammation. Lohuis et al. do not however remedy the deficiencies of Farnsworth since it does not teach the use of a cephalosporin in conjunction with prednisolone and thus obviated the *prima facie* case of obviousness against the claims. Moreover, Applicant demonstrated that a combination of a cephalosporin in conjunction with 20 mg of prednisolone resulted in increased inflammatory efficacy, improved

chemotactic effects, and low immunosuppressive side effects. Since the present claims require the presence of a cephalosporin in conjunction with prednisolone, and Farnsworth et al. alone do not render obvious the particular composition of claim 1, claims 1, 3, 5-8, and 10-13 are therefore allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Claims 1, 3, 5-8, and 10-13 (renumbered 1-10) are allowed.
